### HOW TO REPLY TO THIS NOTICE:

#### I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.**

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 24, 2008 has been entered.

### ***Allowable Subject Matter***

Claims 1, 2-8, 10, 14-17, 19-22, 24-27 and 31-34 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art does not teach nor render obvious the following limitations:

*Defining the link affinity grouping (LAG) based on a plurality of criteria further including classification as primary and secondary link groups for replication of a logical unity (LUN) group, classification into intra-LAG groups, classification into inter-LAG partial inclusion groups, classification as outbound (failover) links, and classification as inbound (failback) links.*

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Claim 1 (Currently amended): A method of interconnecting a network infrastructure via a plurality of communication links comprising:

- defining a link affinity grouping based on a plurality of criteria including throughput for round-robin scheduling and throughput for a next available link scheduling;

- classifying the plurality of communication links according to a link affinity grouping;

- enabling and disabling selective ones of the plurality of communication links according to the link affinity grouping;

- activating a particular link selected from among the enabled communication links using a selection process adapted to characteristics of the link affinity grouping;

analyzing performance of the enabled communication links individually and in aggregate; [[and]]

determining based on the analysis, whether altering assignment of links of two link affinity groups will improve throughput of both groups[[]] ; and

defining the link affinity grouping (LAG) based on a plurality of criteria further including classification as primary and secondary link groups for replication of a logical unit (LUN) group, classification into intra-LAG groups, classification into inter-LAG partial inclusion groups, classification into inter-LAG full inclusion groups, classification as outbound (failover) links, and classification as inbound (failback) links.

Claim 14 (Currently amended): A storage system stored on a computer readable medium comprising:

an interface capable of interconnecting a network infrastructure via a plurality of communication links, the plurality of communication links having a diversity of data-carrying capacity and performance;

a controller coupled to the interface that assigns the plurality of communication links into at least one link affinity group based on performance criteria including throughput for round-robin scheduling and throughput for a next available link scheduling, and that controls link selection based on link affinity group assignment;

the controller manages ordered asynchronous disk array replication by enabling and disabling selective ones of the plurality of communication links according to the link affinity grouping, and activating a particular link selected from among the enabled

communication links using a selection process adapted to characteristics of the link affinity grouping; [[and]]

the controller determines, based on the analysis, whether altering assignment of links of two link affinity groups will improve throughput of both groups[.] ; and

the controller that assigns the plurality of communication links into at least on link affinity group based on performance criteria further including classification as primary and secondary link groups for replication of a logical unit (LUN) group, classification into intra-LAG groups, classification into inter-LAG partial inclusion groups, classification into inter-LAG full inclusion groups, classification as outbound (failover) links, and classification as inbound (failback) links.

Claim 25 (Currently amended): An article of manufacture comprising:

a controller usable storage medium having a computer readable program code embodied therein for interconnecting a network infrastructure via a plurality of communication links, the computer readable program code further comprising:

a code causing the controller to define a link affinity grouping based on a plurality of criteria including throughput for round-robin scheduling and throughput for a next available link scheduling;

a code causing the controller to classify the plurality of communication links according to a link affinity grouping;

a code causing the controller to enable and disable selective ones of the plurality of communication links according to the link affinity grouping;

a code causing the controller to activate a particular link selected from among the enabled communication links using a selection process adapted to characteristics of the link affinity grouping; [[and]]

a code causing the controller to analyze performance of the enabled communication links individually and in aggregate;

~~a code causing the controller to analyze performance of the enabled communication links individually and in aggregate; and~~

a code causing the controller to determine, based on the analysis, whether altering assignment of links of two link affinity groups will improve throughput of both groups [[.]] ; and

a code causing the controller to define the link affinity grouping (LAG) based on a plurality of criteria further including classification as primary and secondary link groups for replication of a logical unit (LUN) group, classification into intra-LAG groups, classification into inter-LAG partial inclusion groups, classification into inter-LAG full inclusion groups, classification as outbound (failover) links, and classification as inbound (failback) links.

Claim 34 (Currently amended): A storage system stored on a computer readable medium comprising:

an interface capable of interconnecting a network infrastructure via a plurality of communication links, the plurality of communication links having a diversity of data-carrying capacity and performance;

a controller coupled to the interface that assigns the plurality of communication links into at least one link affinity group based on performance criteria including throughput for round-robin scheduling and throughput for a next available link scheduling, and that controls link selection based on link affinity group assignments; and  
the controller that assigns the plurality of communication links into at least one link affinity group based on performance criteria further including classification as primary and secondary link groups for replication of a logical unit (LUN) group, classification into intra-LAG groups, classification into inter-LAG partial inclusion groups, classification into inter-LAG full inclusion groups, classification as outbound (failover) links, and classification as inbound (failback) links.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Ken Koestner on June 11, 2008.
